Kemalgeldi Gurbannyyazov

Junior Software Developer | Python, Robotics and Web Applications

Selangor, Malaysia | +60 11 6384 4247 | gurbanniyazovich04@gmail.com
linkedin.com/in/kemalgeldigurbannyyazov | github.com/kemalgeldi

PROFESSIONAL SUMMARY

Early-career software developer with internship experience building Python and ROS software for an autonomous harvesting robot prototype. Developed YOLOv8-based tree detection, state-based navigation logic and a tablet-accessible web interface for camera monitoring and remote robot control. Additional project experience includes PHP and MySQL web development, Java object-oriented programming, and Unity development with C#.

EXPERIENCE

Robotics Software Intern

HUMAC | January - March

- Developed Python software on Linux and ROS for an autonomous harvesting robot prototype, covering perception, target selection and robot behavior.
- Implemented tree detection using YOLOv8 and distance calculations to select the nearest tree as the next navigation target.
- Implemented state-based control logic for searching, approaching targets, harvesting workflows and moving between trees.
- Built a tablet-accessible web interface to view the robot's camera feed and monitor its current operating state.
- Developed a Python backend for remote start, stop and robot control commands through the web interface.

EDUCATION

Diploma in Information Technology

Taylor's University, Selangor, Malaysia | April 2024 - Expected December 2026

Relevant coursework: Object-Oriented Programming with Java, Database Management and Web Development.

Bachelor of Computer Science Honours

Taylor's University, Selangor, Malaysia | Planned Year 2 entry in 2026

Intended specialisation: Artificial Intelligence. Planned progression after completion of the Diploma in Information Technology.

TECHNICAL SKILLS

Programming and web: Python, Java, C#, PHP, SQL, HTML, CSS

Robotics project stack: ROS 1, Linux, YOLOv8, OpenCV, TF coordinate transforms

Databases: MySQL, SQLite, relational database design, CRUD operations

Tools: Unity, Visual Studio, XAMPP, GitHub

Development: Object-oriented programming, state-based control, debugging, form validation, web interfaces

Collaboration: Team projects, task coordination, module integration, deadline planning

PROJECTS

Rocket Navigation

Personal learning project | Unity, C# | 2025

- Developed a 3D rocket navigation prototype in which the player uses thrust and rotation to reach a landing pad while avoiding obstacles.
- Implemented keyboard movement, collision responses, crash restarts and transitions between two scenes using C# scripts.
- Added audio and particle feedback for crashes and successful landings, alongside animated obstacles.
- Published the project source on GitHub as a Unity and C# learning project.

Pokémon Catalog Web Application

Course project | PHP, MySQL, HTML, CSS | 2025

- Built a database-backed catalog with create, read, update and delete functionality for Pokémon entries.
- Created the web interface with HTML and CSS and implemented form validation.
- Connected the application to MySQL through PHP to store and retrieve catalog data.

Food Ordering System

Academic group project | Java, object-oriented programming | 2025

- Collaborated in a team of three to develop a console application for membership management, dine-in orders and takeaway orders.
- Applied object-oriented design and inheritance to represent shared ordering behavior and distinct dine-in and takeaway workflows.
- Coordinated development tasks and integrated modules into the group application.

LANGUAGES

English, Russian, Turkmen and Turkish
